

ZXA10 P610

Industry's first pizza-box optical business gateway

The ZXA10 P610 is a pizza-box optical gateway that can serve as PON OLT or ONU. It can be served as an integrated gateway in enterprise/campus scenarios such as hotel, commercial building, hospital and factory networks.

The ZXA10 P610 uses a metallic subrack structure with a height of 1U and a width of 19 inches. It can be installed in ZTE's standard 19-inch indoor and outdoor cabinets.

1. Small size, compact design with powerful capabilities

One equipment with multiple capabilities

5-in-1:
OLT + ONU + Switch + Router + AC

One device for all access

Uplink: XG(S)-PON, 10GE/GE
Downlink: XG(S)-PON, GPON, P2P

One fiber for all-scenario coverage

One fiber for wireline and wireless coverage

One network supporting high concurrency

256 AP access, **2000** STAs concurrent

2. Full security protection and high reliability

High **hardware** reliability

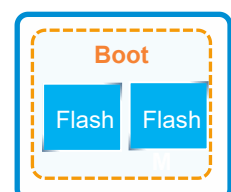

- Power and fan modules are hot swappable
- The fan can operate at a full speed even under abnormal situations, ensuring system heat dissipation

High **software** reliability

- Loose coupling design
- Fault monitoring and handling capability
- Support hot patches
- Capabilities of web portal and IEEE 802.1x authentication

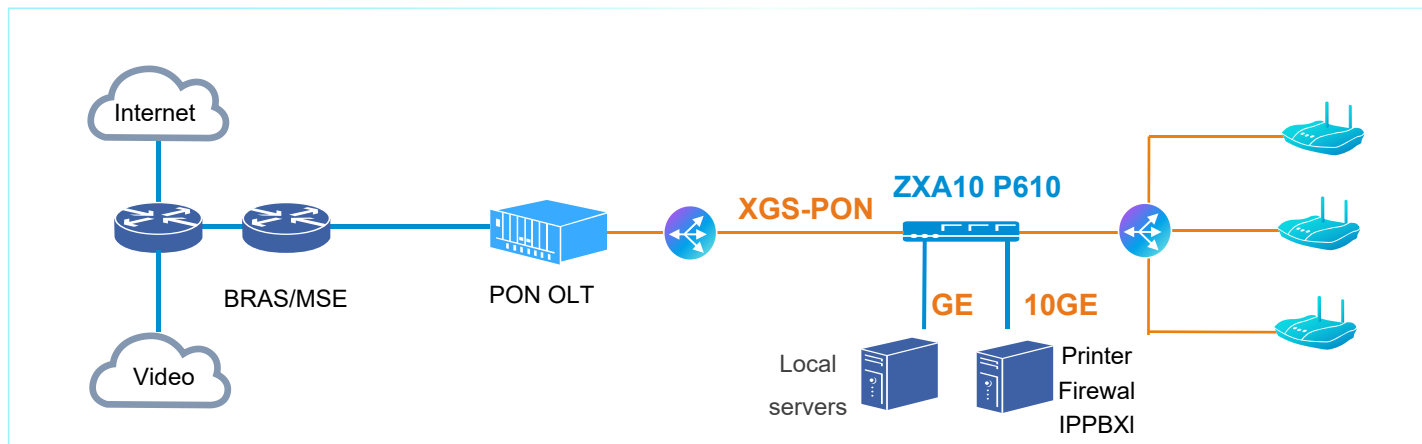

High reliability

- Boot flash chip backup, can be rolled back to history boot
- Data comparison

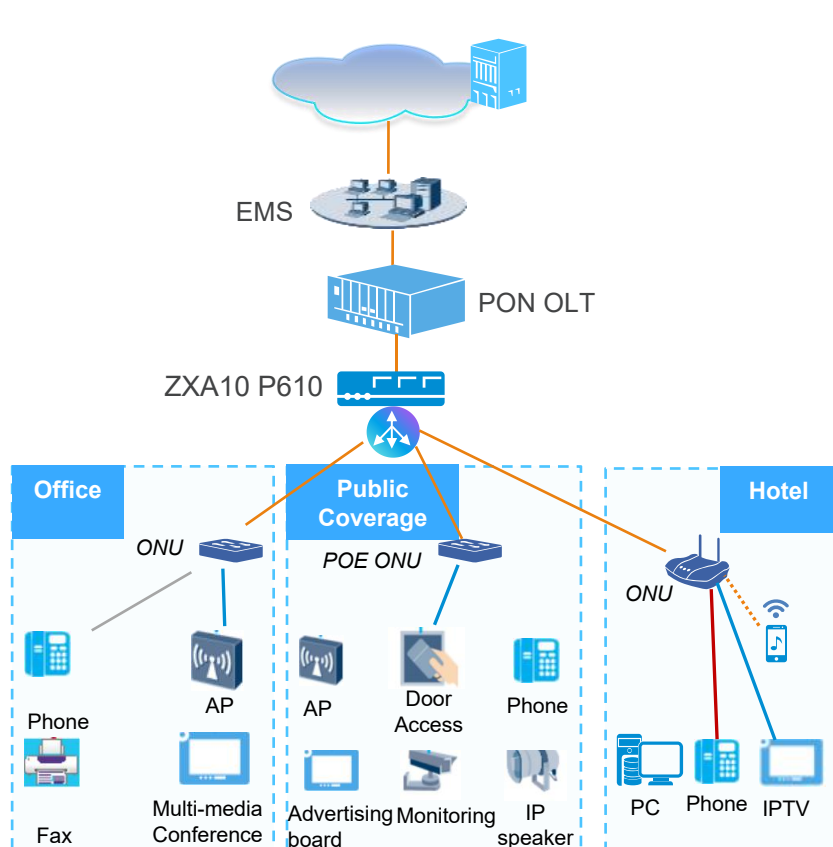

3. Meet multi-scenario demands, can serve as PON OLT or ONU

- ZXA10 P610 is served as an integrated gateway in the network topology.
- Various types of POL terminals can be connected to ZXA10 P610 to meet the requirements of enterprise and campus users with high bandwidth.

4. FTTR feature, supports EMS end-to-end management

Independent IP address

- ZXA10 P610 has an independent management IP, which is different from the IP address of OLT placed in operators' central office
- Can be managed by EMS as an independent NE

Connected management channel

- OLT provides SNMP interface to connect to P610's built-in OLT's management channel and completes the IP address management.

Realize end-to-end management

- EMS can present the typology of CO OLT - P610 - integrated terminals and implements end-to-end devices management.
